

What is the Gum Builder™?

- **Non-surgical, minimally invasive** gum recession treatment
- **#1 solution** for mild and moderate recession cases
- **#1 alternative to** gum graft **surgery**
- **Scientifically proven** regenerative periodontal therapy
- **FDA cleared** since **2003** CaHA filler collagen biostimulator
- **Stimulates gum regeneration** through collagen biostimulation
- Takes **minutes** to deliver treatment
- **Little to no** post op **complications or pain**
- **Reduces** tooth **sensitivity** within days

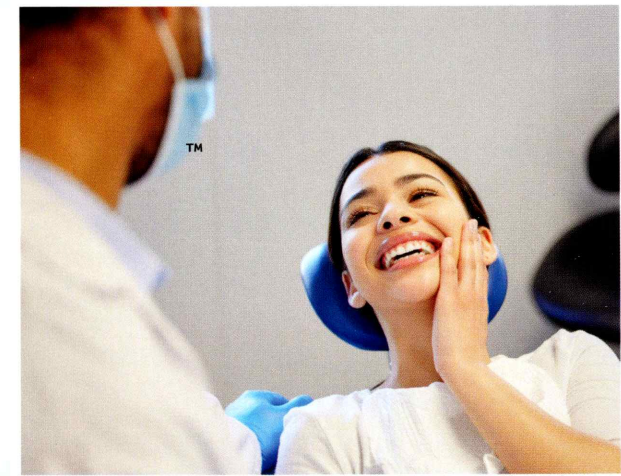

What Can You Expect From This Treatment?

The Gum Builder™ treatment is a relatively painless procedure. The dentist will numb the gum prior to the procedure, and afterwards the area may feel slightly swollen. While some people find relief with Tylenol or ibuprofen, many do not require any medication. Depending on the severity of gum recession, you may need up to three treatments spaced 4-6 weeks apart. Furthermore, maintenance visits may be necessary alongside your regular dental cleanings.

Incredible Results!

People can expect to see a **rapid improvement** in their tooth sensitivity, many times within 2-3 days, and can expect to see an improvement of gum recession in 4-6 weeks. For severe gum recession, the GumBuilder™ treatment is not a replacement for gum surgery. **It is an excellent alternative for those who do not want gum surgery** to stabilize and regenerate gum tissue.
